I FISH PRO 2.0

TACTICAL ICE GEAR

NOW WITH
FOAM
INSULATED
BASE

Use your favorite rod and reel rather than trying to manage the fish by hand.

- One tip-up can be used for all species
- Change rods as you wish; you don't need to re-spool
- No more frozen and tangled line spread out all over the ice
- Great for fishing in very deep water
- Use it in your fish house; the tip-up sits securely over your catch-cover holes

Features an adjustable and durable rod holder

- Rod holder can accommodates several different rod lengths
- Stabilizer on rod holder keeps your rod securely in place
- Rod holder folds for convenient storage

Base is large enough to cover the hole correctly

- Features an insulated base and a protective cover plate. (See photo of bottom of insulated base to the left.)
- Black base absorbs heat from sunlight
- Wind deflector protects from false flags and helps prevent snow build-up
- Tip-up includes seven slip-stops and two triggers

Flag is designed to be triggered only by the pull of the fish

- Unlike other tip-ups, the flag won't be triggered by the bait or other causes, even when you're using big baits
- Has an offset that reduces the trigger's travel distance, allowing fast response to light bites
- Bright red, 3-dimensional flag makes it easy to see from all angles

Trigger has three settings to choose from: light, medium, and heavy

- Allows you to choose the correct setting for your bait size and the fish you're after
- The multiple settings prevent false flags

Slip-stop allows you to jig without having to move your tip-up

- Use favorite bobberstop to set desired fishing depth
- Thread slip stop onto fishing line and place on trigger, slips stop should be curved down
